

Repair Service and Maintenance of Units

A service of the AICHELIN Group

SPARE AND WEAR PARTS

Process Reliability + Optimization of Downtime

YOU DON'T HAVE TO DO IT ALL YOURSELF

In addition to traditional maintenance, some units require annual or **regular servicing or replacement**.

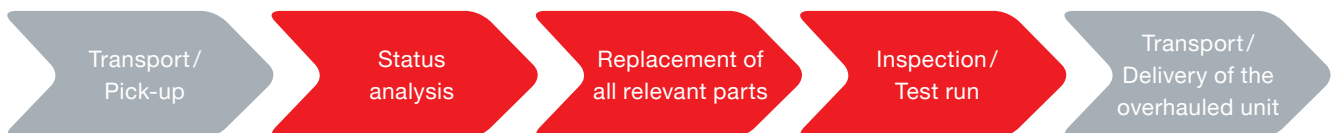

Repairs and maintenance work on these **units that are critical to operations** require comprehensive expertise in a wide range of areas. Special tools, devices, and techniques are also a prerequisite for **successful and lasting repairs**. In addition, everything must be coordinated with the various suppliers.

The many prerequisites and interfaces entail a high logistical risk, considerable effort on behalf of the maintenance engineer, and a high **production risk** for your company.

We can offer you **everything from a single source** in order to mitigate these risks and efforts – in usual **AICHELIN quality**.

This service not only **saves you resources**, but above all can also be **planned reliably**.

THE AICHELIN SOLUTION: EASY WITH AICHELIN SERVICE

We are currently offering this service for the following units:

- Circulators
- C- & T-controller parametrizations
- Tray transport
- Endomat retorts
- Turbo (SAFED)
- Inner door
- Burner maintenance

Don't see your desired unit here? Please contact us and let us know!
